It is a pleasure to present our new stoma booklet to you. You will find an extensive range of new products as well as product improvements. In the Netherlands EuroTec develop and manufacture high grade products to make the life of stoma patients as easy and comfortable as possible. In this edition you will find products that are compatible with other brands, as well as accessories that are unique to EuroTec.

The founders of EuroTec have more than 30 years experience in the field of stoma care. EuroTec market and distribute their products in various European and North-African countries. Their goal is to become a global player in the field of ostomy care. The EuroTec team will assist you with all your questions and requests.

If you are interested in our products, do not hesitate to contact EuroTec on +31 165 55 12 26 or email them on info@eurotec.eu. You will find more information about EuroTec on the back cover of this booklet.

Layout ostomy booklet

The layout of this booklet is listed by ostomy type, e.g.
Colostomy = blue,
Ileostomy = red,
Urostomy = green,
Accessories = purple.
We hope you find your way easier in our extensive range of ostomy appliances.

All trademarks in this booklet are from EuroTec, with exception of the following trade marks: ConvaTec and Natura are registered trade marks of E.R. Squibb & Sons, Inc. Hollister and Tandem are registered trade marks of Hollister Inc.
Coloplast, Assura en SenSura are registered trade marks of Coloplast A/S Denmark.

- One-piece convex pouches for larger colostomies (page 39) and ileostomies (page 52).
- One-piece convex closed pouches medium/large (page 40) and convex medium drainable pouches (page 53).
- One-piece convex closed pouches (page 40) and drainable pouches for oval ostomies (page 53).
- ILEOMATE 1-piece High Output pouches with horizontal and vertical positioned adhesive (page 54).
- ILEOMATE 1-piece multifunctional pouches for children (page 50).
- ILEOMATE 1-piece post-operative pouches with access window (page 65).
- ILEOMATE 1-piece drainable pouches; addition of the 19 mm ostomy opening (page 48).
- COLOMATE 1-piece closed pouches; addition of the 22 mm ostomy opening (page 35).
- FLEXIMATE 2-piece drainable pouches with tail clips (page 46).
- EuroTec 5 cm wide belt with 2-point belt connection (page 73).
- Varimate Standard wafers and strips (page 84) and Varimate SuperSoft wafers and strips (page 85).
- LEASORB security pad (page 79). To limit the effects of a leakage.
- EuroTec support plates (page 73).

OSTOMATE 1-PIECE SYSTEM

The OSTOMATE budget ostomy system is of high quality but cheaper than other systems. Because the pouches of this system are only available with starter holes, the 1-piece OSTOMATE range can be limited to only 10 types of pouches for colo-, ileo and urostomy. This allows great savings in manufacturing and logistics.
The Ostomate II range is offered at a price which is considerably lower than that of similar wafers and pouches, yet this is a premium and excellent ostomy system which fulfils the highest quality requirements. This 2-piece system consists of wafers and pouches with a 38 mm, 45 mm, 57 mm or 70 mm flange. The wafers are only available with a start opening, which must be cut to size. This generates a saving which also benefits the pouch user.

**Universal system**

The Ostomate II wafers are virtually identical to ConvaTec Natura wafers. In practice you will not notice the difference, so converting to Ostomate II wafers is very easy and saves money! In addition to matching the Natura system of ConvaTec, Ostomate II wafers are also compatible with the COMBIMATE system by EuroTec, together with the Tandem system by Hollister.
**2-PIECE FLANGES  
ALL TYPES IN A ROW**

EuroTec manufacture 7 types of flanges, available with different flange locking systems and generally with a wide range of precut openings.

**SUPERSOFT WAFER**

The new generation flanges, made only of hydrocolloid and extremely flexible. See page 12.

**SUPERFLEX WAFER**

Extremely flexible hydrocolloid framed by a skin friendly, breathable plaster in white or beige. See page 14.

**CONVEX WAFER**

Flexible convex flanges available in shallow convex and extra convex. See page 16.

**ADVANCE WAFER**

Special flanges, reinforced with polyester fibers, to support a weak peristomal surface. See page 18.

**OSTOMATE II WAFER**

---

**2-PIECE POUCHES  
ALL TYPES IN A ROW**

EuroTec offer a wide range of stoma pouches in many sizes and models. Closed and drainable pouches are available in 5 different sizes and urostomy pouches in 3 sizes.

A NEW GENERATION

1-PIECE POUCHES

The 1-piece Colomate, Ileomate and Uromate SuperFlex pouches are finished with a soft flexible adhesive wafer. The plastic film of the pouch is welded well away from the aperture of the pouch enabling the aperture to be stretched and moulded to the required shape and size. The pouch will never cut into the stoma, even if the hydrocolloid has completely dissolved.

Superflex pouches are available with many pre-cut stoma openings. These stoma openings can easily be stretched if they are slightly too small. For a stoma diameter of 27 mm a size 25 mm can be selected and stretched up by 2 mm. Cutting to size will rarely be necessary. The stoma opening will also expand to allow for the passage of solid stool. It is even possible for the adhesive to adapt to a retracted skin area.

Pouches with an oval adhesive wafer are not available in a SuperFlex version.

1-PIECE POUCHES

ALL TYPES IN A ROW

EuroTec offer a wide range of stoma pouches in many sizes and models. Closed and drainable pouches are available in 5 sizes and urostomy pouches in 3 sizes.

1-PIECE CLOSED POUCHES see page 35-41

1-PIECE DRAINABLE POUCHES see page 48-55

1-PIECE UROSTOMY POUCHES see page 61-65
COMBIMATE SUPERSOFT FLANGES

COMBIMATE SuperSoft flanges are superior in terms of softness, flexibility and comfort. This is the result of the final top foam layer. They are also safer than many other flanges, where the rigid top layer can potentially damage the stoma when the adhesive layer has melted. This effect is precluded with SuperSoft flanges. COMBIMATE SuperSoft flanges are available with many pre-cut openings that can be stretched if needed. This mostly eliminates the necessity for cutting to size.

The flexible hydrocolloid skin barrier conforms to the contours of the skin, even if this is somewhat retracted.

COMBIMATE SuperSoft flanges are available in the sizes 38 mm, 45 mm, 57 mm, 70 mm, 85 mm and 100 mm.

These EuroTec flanges are fully compatible with ConvaTec’s Natura system (except 85 mm).

For compatible Combimate pouches see page’s 31, 32, 43, 44, 57 and 58.

The opening can be stretched easily and will also expand during the passage of solid stool.

**COMBIMATE SUPERFLEX FLANGES**

COMBIMATE SuperFlex flanges are in fact smaller SuperSoft flanges, framed by a flexible, breathable plaster. The stoma opening, if somewhat too small, can be stretched to fit. The foam top layer will never cut into the stoma, even if the hydrocolloid has dissolved. COMBIMATE SuperFlex flanges are available with a white water based plaster frame (FFW version) or a slightly stronger adhering beige plaster frame (FFB version), both being very skin friendly.

All COMBIMATE SuperFlex flanges will match ConvaTec’s Natura pouches.

COMBIMATE SuperFlex flanges are available with many pre-cut openings, that can be stretched a bit further. So cutting to size will rarely be necessary.

COMBIMATE SuperFlex flanges are available in flange diameters 38 mm, 45 mm, 57 mm and 70 mm. *For compatible Combimate pouches see pages 31, 32, 43, 44, 45, 57 and 58.*

The beige SuperFlex flange is available with a wide range of pre-cut openings. The adhesive surface of the 38 mm SuperFlex wafer (left) is larger than that of ConvaTec (right), giving more security with loose stool or urine. The stoma opening can easily be stretched. With a stoma of 27 mm a 25 mm opening can be selected and stretched. The stoma opening will also expand with the passage of solid stool.

COMBIMATE convex flanges are available in Shallow Convex and Extra Convex.

Convex flanges are used with stomas which are flush or retracted and particularly when the surrounding skin is moist and irritated. As no other, the COMBIMATE Convex flanges will perform well under these conditions. To support the secure adhesion of the flange in a retracted area, the use of a support belt may help (see pages 72, 74 and 75).

The COMBIMATE Convex flange has a large hydrocolloid surface. Available in Convex (FC) and Extra-Convex (FXC) version and with many pre-cut openings and starter holes. The opening can be easily stretched a little bit if necessary.

Extra-Convex flanges are to be used only for deeply retracted areas, after consulting a stoma care nurse.

Combimate Convex wafers are available in the flange diameters 38 mm, 45 mm, 57 mm and 70 mm.

For compatible Combimate pouches see pages 31, 32, 43, 44, 45, 57 and 58.

These wafers are fully compatible with the ConvaTec Natura system. Pouches and wafers of these systems are matching.
COMBIMATE ADVANCE FLANGES

COMBIMATE Advance flanges are reinforced with strong polyester fibers, and are designed mainly for people with a weak parastomal musculature. The wafers are flexible and comfortable, but will help to prevent bulging out of the skin area around the stoma. In many cases it is advisable to wear a stoma support belt (see pages 74-75).

COMBIMATE Advance flanges are moisture permeable and have a Classic Hydrocolloid Stoma Adhesive of 1.5 mm thick with a high absorption capacity and no added elastomers. For external support of a larger skin surface where a parastomal hernia may be developing, ADVANCE EXTRA LARGE flanges may be of help. The large adhesive surface measures 15 x 15 cm. To prevent drying out or curling of the edges, these can be picture framed with VARIMATE THIN strips VMT 0522 (see page 68).

COMBIMATE Advance wafers are available with flange diameters 38 mm, 45 mm, 57 mm and 70 mm. The Extra Large wafers have also 85 mm and 100 mm flanges.

From these 6 flange diameters, 5 are compatible with Convatec Natura pouches (the ConvaTec range does not include 85 mm flanges).

This product is designed to be applied to an abdominal wall with weak musculature to prevent bulging etc. The use of a support belt is advisable in these circumstances.
COMBIMATE XL FLANGES

The extra large COMBIMATE XL flanges are available in several versions and for different applications.

COMBIMATE SuperSoft XL are designed specially to be used on extremely bulging skin areas, such as a serious parastomal hernia. If the flange is too rigid or too small, it is not easy to attach this securely onto such a spherical surface. The stoma opening can be cut to size and can be stretched for a good fit. The soft foam layer will never cut into the stoma, not even when the adhesive layer has melted down.

COMBIMATE Advance XL flanges are reinforced with polyester fibres and specially designed to support the skin over a bulging hernia. See product information on page 18.

All COMBIMATE SuperSoft XL flanges are compatible with ConvaTec Natura pouches (except 85 mm flanges).

*Are you a user of the 2-piece Coloplast system? Try our FLEXIMATE flanges!*

These flanges are extremely flexible, can be stretched up with the stoma and have a large moist absorption capacity. **These flanges are available in flange sizes 40, 50 en 60 mm, and are fully compatible with the pouches of the Coloplast Assura and SenSura Click system.**

Now Coloplast users can also benefit from these superb flanges. Of course EuroTec also offers Fleximate pouches in various models, that are compatible with Coloplast flanges (see page’s 33, 46 and 59).

The FLEXIMATE flanges have no added synthetic rubbers but contain much gelatin for an optimum moisture control, resulting in a good skin condition. The extreme flexibility of the hydrocolloid barrier results in good skin contact, even in retracted areas.

FLEXIMATE flanges are available with many pre-cut openings, that can be stretched somewhat further. **So cutting to size will hardly be necessary.** FLEXIMATE flanges have a long wear time, and resist the effects of warm weather and perspiration.
**FLEXIMATE SUPERFLEX FLANGES**

FLEXIMATE SuperFlex flanges are in fact smaller SuperSoft flanges, framed by a round, flexible, breathable plaster. The stoma opening can be easily stretched to fit if it is too small. The foam top layer will never damage the stoma, even if the hydrocolloid has dissolved.

FLEXIMATE SuperFlex flanges are available in flange diameters 40 mm, 50 mm and 60 mm and these will match perfectly with the Coloplast Assura and SenSura stoma pouches. Now, Coloplast users can also benefit from these superb flanges.

The FLEXIMATE flanges have no added synthetic rubbers but contain much gelatin for an optimal moisture control, resulting in a good skin condition. The extreme flexibility of the hydrocolloid barrier results in good skin contact, even in retracted areas.

FLEXIMATE flanges are available with many pre-cut openings, that can be stretched further. **So cutting to size will hardly be necessary.**

See for matching Fleximate pouches pages 33, 46 and 59.

*Can easily be moulded into a convex shape to adapt to a retracted area of skin.*
FLEXIMATE Convex flanges are available in diameters 40 mm, 50 mm and 60 mm, compatible with Coloplast Assura and SenSura stoma pouches. Now Coloplast users can also benefit from these superb flanges.

EuroTec convex flanges have no added synthetic rubber. In peristomal areas the skin is often irritated and under these circumstances the FLEXIMATE Convex flanges will perform really well. They also have a large hydrocolloid surface.

Available in Convex (FC) and Extra-Convex (FXC) and with many pre-cut openings and starter holes. The opening can be easily stretched a little bit if necessary.

Extra-Convex flanges are to be used only for deeply retracted areas, after consulting a stoma care nurse.

See for matching Fleximate pouches pages 33, 46 en 59.

**Advice:**
Apply the flange with the corner facing down as illustrated.

OSTOMATE II 2-PIECE FLANGES

OSTOMATE II 2-piece skin protective wafers are available in both a standard and a flexible version.

For further information see pages 6 and 7.

OSTOMATE II Standard wafer (FSO version)  OSTOMATE II Flexible wafer (FFO version)

OSTOMATE II 2-piece wafers consist of an extremely skin friendly hydrocolloid, which easily adheres to both a dry or wet skin. This skin barrier is 1.4 mm thick and due to its capability to absorb moisture from the skin, it is very suitable for active people even in warm weather conditions. Ostomate skin barriers may also be used in case of sore or irritated skins, allowing the underlying skin to heal.

OSTOMATE II standard flanges are full hydrocolloid wafers, consisting of gelatin, pectin, sodiumcarboxymethylcellulose and polyisobutylene, laminated by a transparent polyethylene film. Latex free.

OSTOMATE II flexible flanges are in fact smaller standard wafers, framed by a flexible, water based breathable plaster. Latex free.

OSTOMATE II 2-piece products are compatible with EuroTec Combimate, ConvaTec Natura and Hollister Tandem stoma systems, which means that the stoma pouches and skin barriers of these competitive systems are fully interchangeable.

Closed pouches

COMBIMATE 2-PIECE CLOSED POUCHES

All COMBIMATE closed pouches are provided with a bar filter that is effective for 24 hours. A unique feature is the extra ‘rain coat’ layer between the stoma and the filter, preventing blockage of the filter and subsequent leakage and staining. This feature makes these pouches also ideal for people with liquid stool.

COMBIMATE CLOSED POUCHES
LARGE BEIGE WITH BAR FILTER
Nicely finished with a non-woven fabric on both sides. Good capacity closed pouch.
Dimensions (h x w) 20.5 cm x 14.5 cm.
Order code   Flange diameter   Packed
CLB 238  38 mm  30 pcs.
CLB 245  45 mm  30 pcs.
CLB 257  57 mm  30 pcs.
CLB 270  70 mm  30 pcs.

COMBIMATE CLOSED POUCHES
LARGE SEMI-TRANSPARENT OVERLAP
Similar to CLB version, but in semi-transparent version with inspection window.
Dimensions (h x w) 20.5 cm x 14.5 cm.
Order code   Flange diameter   Packed
CLT 245  45 mm  30 pcs.
CLT 257  57 mm  30 pcs.
CLT 270  70 mm  30 pcs.

COMBIMATE CLOSED POUCHES
MEDIUM LARGE BEIGE
Similar to CLB version, but smaller and anatomically shaped.
Dimensions (h x w) 18 cm x 14 cm.
Order code   Flange diameter   Packed
CMLB 238  38 mm  30 pcs.
CMLB 245  45 mm  30 pcs.
CMLB 257  57 mm  30 pcs.
CMLB 270  70 mm  30 pcs.
COMBIMATE CLOSED POUCHES
MEDIUM BEIGE WITH BAR FILTER
Activity pouch with a flat non-contoured upper section and highly positioned flange, preventing the pouch from protruding over the waistband.
Dimensions (h x w) 14.5 cm x 13 cm.
Order code  Flange diameter  Packed
CMB 238  38 mm  30 pcs.
CMB 245  45 mm  30 pcs.
CMB 257  57 mm  30 pcs.

COMBIMATE CLOSED POUCHES
SMALL BEIGE WITH BAR FILTER
Very suitable as a fistula pouch or as a closed pouch for children.
Dimensions (h x w) 16 cm x 10 cm.
Order code  Flange diameter  Packed
CSB 238  38 mm  30 pcs.
CSB 245  45 mm  30 pcs.

COMBIMATE STOMACAPS
BEIGE WITH BAR FILTER
For fistulas or following bowel irrigation.
Contains an absorption pad.
Dimensions (h x w) 11 cm x 11 cm.
Order code  Flange diameter  Packed
CCB 238  38 mm  30 pcs.
CCB 245  45 mm  30 pcs.
CCB 257  57 mm  30 pcs.

COMBIMATE CLOSED POUCHES
X-LARGE SEMI-TRANSPARENT WITH BAR FILTER
Semi-Transparent version with inspection window. Can be made fully transparent by simply removing the needle pin film.
Dimensions (h x w) 22 cm x 15 cm.
Order code  Flange diameter  Packed
CXLT 285  85 mm  15 pcs.
CXLT 2100  100 mm  15 pcs.

FLEXIMATE CLOSED POUCHES
LARGE BEIGE WITH BAR FILTER
Nicely finished with a non-woven fabric on both sides. Rotatable around the flange for optimal comfort. Good capacity closed pouch.
Dimensions (h x w) 20.5 cm x 14.5 cm.
Order code  Flange diameter  Packed
CLB 240  40 mm  30 pcs.
CLB 250  50 mm  30 pcs.
CLB 260  60 mm  30 pcs.

FLEXIMATE CLOSED POUCHES
MEDIUM LARGE BEIGE WITH BAR FILTER
Anatomically shaped pouch which is sized mid way between medium and large.
Dimensions (h x w) 18 cm x 14 cm.
Order code  Flange diameter  Packed
CMLB 240  40 mm  30 pcs.
CMLB 250  50 mm  30 pcs.
CMLB 260  60 mm  30 pcs.

FLEXIMATE CLOSED POUCHES
MEDIUM BEIGE WITH BAR FILTER
Activity pouch with a flat non-contoured upper section and highly positioned flange, preventing the pouch from protruding over the waistband.
Dimensions (h x w) 14.5 cm x 13 cm.
Order code  Flange diameter  Packed
CMB 240  40 mm  30 pcs.
CMB 250  50 mm  30 pcs.
CMB 260  60 mm  30 pcs.

FLEXIMATE closed pouches are secured with a “Lock Ring”. They are provided with a bar filter that is effective for 24 hours. A unique feature is the extra ‘rain coat’ layer between the stoma and the filter, preventing blockage of the filter and subsequent leakage and staining. This feature makes these pouches also ideal for people with liquid stool.
OSTOMATE II 2-PIECE CLOSED POUCHES

The OSTOMATE II closed pouches are available with and without the 24-hour bar filter.

OSTOMATE II CLOSED POUCHES
LARGE BEIGE WITH BAR FILTER
Nicely finished with a non-woven fabric on both sides. Good capacity pouch.
Dimensions (h x w) 20.5 cm x 14.5 cm.
Order code  Flange diameter  Packed
COLO-LB45  45 mm  40 pcs.
COLO-LB57  57 mm  40 pcs.
COLO-LB70  70 mm  40 pcs.

OSTOMATE II CLOSED POUCHES
LARGE BEIGE WITHOUT FILTER
Similar to the above version, but without bar filter.
Order code  Flange diameter  Packed
COLO-LB45Z  45 mm  40 pcs.
COLO-LB57Z  57 mm  40 pcs.
COLO-LB70Z  70 mm  40 pcs.

OSTOMATE II CLOSED POUCHES
MEDIUM BEIGE WITH BAR FILTER
Activity pouch with a flat non-contoured upper section and highly positioned flange, preventing the pouch from protruding over the waistband.
Dimensions (h x w) 14.5 cm x 13 cm.
Order code  Flange diameter  Packed
COLO-MB45  45 mm  40 pcs.
COLO-MB57  57 mm  40 pcs.

COLOMATE 1-PIECE CLOSED POUCHES

Attractive closed pouches with a bar filter that is effective for 24 hours. The filter opening can be closed with the filter covers provided. An extra ‘rain coat’ layer between the stoma and filter will prevent blockage of the filter, leakage and subsequent staining which makes these pouches also ideal for people with loose or liquid stool.

COLOMATE CLOSED POUCHES
LARGE BEIGE WITH BAR FILTER
Nicely finished with a non-woven fabric on both sides. Stretchable stoma openings. Can be cut up to 60 mm.
Dimensions (h x w) 20.5 cm x 14.5 cm.
Order code  Stoma opening  Packed
CLB  113  13 mm (start)  30 pcs.
CLB  122  22-24 mm  30 pcs.
CLB  125  25-27 mm  30 pcs.
CLB  128  28-31 mm  30 pcs.

COMBIMATE 2-PIECE HIGH-OUTPUT POUCHES
with velcro closure and ‘Finger Pocket’ (except IXSB).
FLEXIMATE 2-PIECE DRAINABLE POUCHES
with velcro closure and ‘Finger Pocket’.

FLEXIMATE drainable pouches are secured with a “Lock Ring”. They are provided with a bar filter that is effective for 24 hours. A unique feature is the extra ‘rain coat’ layer between the stoma and the filter, preventing blockage of the filter and subsequent leakage and staining. This feature makes these pouches also ideal for people with liquid stool.

FLEXIMATE DRAINABLE POUCHES
LARGE BEIGE WITH BAR FILTER
Nicely finished with non-woven fabric on both sides. Provided with a 24 hour bar filter with Gore-Tex membrane.
Dimensions (h x w) 28 cm x 14.5 cm.

ILEOMATE DRAINABLE POUCHES
X-LARGE SEMI-TRANSPARENT
CONVEX OVAL WITH BAR FILTER
Oval convex wafer. Semi-Transparent version with beige non woven on the body side and 2 overlapping layers of beige ‘needle pin’ on the front side. Can be cut up to a maximum of 44 x 34 mm or 54 x 44 mm. Volume 500 ml.
Dimensions (h x w) 28 cm x 15 cm.
Order code    Stoma opening   Packed
ILTCO 113-44 13 mm (start) 10 pcs.
ILTCO 113-54 13 mm (start) 10 pcs.

These pouches have a special 4-point belt connection to spread the pressure around a retracted stoma. More info on the 4-point belt on page 72.
1-PIECE HIGH-OUTPUT DRAINABLE POUCHES

Drainable pouches with bottom tap and tail clip.

HIGH OUTPUT POUCH
WITH BAR FILTER, SEMI-TRANSPARENT
Extra large pouch with horizontal oval wafer. Drain by choice with bottom tap or supplied tail clip. For wounds, fistulas or ostomies with extreme high output. Adaptors for connecting a night drainage bag are included. Can be cut up to 70 x 110 mm. Volume 550 ml. Dimensions (h x w) 28 cm x 15 cm.
Order code  Stoma opening  Packed
IXLT 110B    10 mm          30 pcs.

HIGH OUTPUT POUCH
WITH BAR FILTER, SEMI-TRANSPARENT
Similar to the IXLT version but slimmer with vertical oval wafer. Volume 550 ml. Dimensions (h x w) 28 cm x 15 cm.
Order code  Stoma opening  Packed
ILTO 110B    10 mm          30 pcs.

OSTOMATE 1-PIECE DRAINABLE POUCHES

OSTOMATE DRAINABLE POUCHES
LARGE BEIGE OR SEMI-TRANSPARENT WITHOUT FILTER
Available in beige version (LB) or semi-transparent version with inspection window (LT). With tail clips. Can be cut up to 60 mm. Dimensions (h x w) 28 x 14.5 cm.
Order code  Starter-opening  Packed
ILEO-LB     13 mm          30 pcs.
ILEO-LT     13 mm          30 pcs.

OSTOMATE DRAINABLE POUCHES
MEDIUM BEIGE WITHOUT FILTER
With tail clips. Can be cut up to 60 mm. Dimensions (h x w) 24.5 x 14.5 cm.
Order code  Starter-opening  Packed
ILEO-MB     13 mm          30 pcs.

OSTOMATE DRAINABLE POUCHES
SMALL BEIGE WITHOUT FILTER
With built-in wire clip. Can be cut up to 50 mm. Dimensions (h x w) 21 x 10 cm.

Order code  Stoma opening  Packed
POV 110B 10 mm               10 pcs.
CIRCLEMATE is the brand name of circular stoma plasters. They are available in beige with a hypo-allergenic solvent acrylic adhesive and in white with a water-based acrylic adhesive, which is even more skin friendly. The plasters help to improve the comfort and security of the pouch and flange. Suitable for all brands of ostomy appliances. CIRCLEMATE plasters prevent the edges of the flange or pouch adhesive from:

- lifting and possibly leaking.
- drying out and becoming rigid.
- ‘flowing’ and sticking to the pouch.
- becoming slimy during bathing or swimming.

If the edges of the flange dry out and become rough and hard, they may cause irritation of the skin. Alternatively, the adhesive layer may ‘bleed’ or ‘flow’ in the presence of heat and moisture, causing the edges to stick to the pouch. Occasionally, when bathing or swimming, the edges may even become moist. This problem may also occur with 1-piece ostomy pouches and this can be prevented with special circular CIRCLEMATE plasters, available in many sizes. See page 67. Although these are very skin friendly, they can - like all plasters - cause irritation when used on sensitive skin. In which case it is preferable to use the ultra thin VARIMATE THIN hydrocolloid strips, which are 5 times thinner than the hydrocolloid of the flange. The material absorbs a lot of moisture, fits well, is breathable and water resistant.

VARIMATE THIN strips are available in the sizes:
- 3 x 11 cm with Order code VMT 0311, packed 60 pcs.
- 5 x 11 cm with Order code VMT 0511, packed 30 pcs.
- 5 x 22 cm with Order code VMT 0522, packed 20 pcs.

VARIMATE RESIST double-sided adhesive washers are an excellent alternative to traditional stoma paste from a tube. They can be moulded with the fingers, stretched and remodeled. They will always remain sticky! VARIMATE RESIST is highly resistant against urine and liquid stool. VARIMATE RESIST can be stretched to fit well around the stoma. The flange or pouch can then be applied over it. The material is also very suitable to fill small skin folds (as paste strips) or larger folds and scars (VARIMATE EYE). VARIMATE RESIST contains a small amount of synthetic elastomers.

Suffering from leakage?

If the stool or urine is undermining both sides of the flange, this may be due to skin folds around the stoma. These skin folds can be filled with pieces of double sided adhesive hydrocolloid in the form of a wedge.

Because the cutting of wedges is a difficult and time-consuming job for many people, EuroTec offers ready made VARIMATE wedges. The wide side of the wedges can be placed in the fold, near the stoma, while the point of the wedge is away from the stoma. For deeper folds, multiple wedges can be applied on top of each other, with the smallest applied first. VARIMATE wedges are available in two sizes:

- **Wedges large**
  - 40 pcs.
  - Order code VMW 40

- **Wedges small**
  - 60 pcs.
  - Order code VMW 60

VARIMATE DUO double sided adhesive wafers are made from optimally absorbing Classic Stoma Adhesive without the addition of synthetic rubbers (elastomers). VARIMATE double sided adhesive wafers are not sterilized, but they have been manufactured under strict conditions in a classified clean room, and laminated under high temperature with a hermetically sealed silicone release paper.

VARIMATE DUO is particularly useful as a filler for creases and uneven skin around stomas and fistulas or scarred surfaces for example. It can be used to create a level platform on the skin to which a collection device can be attached. VARIMATE DUO is available in many versions and can easily be cut to size.

ELASTOMATE SUPPORT BELTS
ELASTOMATE support belts are made of high grade, solid elastic material for maximum comfort. The opening is reinforced with a plastic rim. These support belts are available in three different widths: 10 cm, 15 cm and 23 cm and different lengths, adjustable with a velcro closure. All support belts are available with an aperture of 60 mm or 72 mm.
The 15 and 23 cm wide belts also come with an opening of 83 mm.
The 10 and 15 cm wide belts can be used for left and right sided stomas. The 23 cm hernia belts are available in either a left or right sided version, depending on the position of the stoma.

ELASTOMATE SUPPORT BELTS

Indications:
The 10 cm wide belt is primarily intended for:
• Additional support of the appliance.
• Providing additional support and pressure around retracted stomas.
• Supporting weak abdominal musculature directly around the stoma.

The wider support belts, 15 cm and 23 cm also have the following features:
• helping to prevent or support a hernia around the stoma.
• supporting a weak abdominal area.

As an option, all belts can be fitted with a ‘prolapse flap’ - an elastic strip which can be stretched over the stoma to give counter pressure, and additional support. This option is particularly useful during sporting activities, when lifting heavy items or with a prolapse.

Order code PF 75:
Prolapse flap 7,5 cm wide.

Order code PF 100:
Prolapse flap 10 cm wide.

Contra-indications: serious lung / ventilation problems.

STOMA ACCESSORIES

GORE-TEX FILTER MEMBRANE
Are you using pouches with a filter and do you like to swim? Then protect your filter with GORE-TEX filter covers. The covers prevent the filter from becoming wet, and they will continue to work under water. The covers also prevent leakage and staining through the filter. Can be used for other brands of pouches. Order code GT 20. (large) per 20 pcs.. Order code GT 30. (small) per 30 pcs..

GELLYMATE ABSORPTION CAPSULES
GELLYMATE ABSORPTION DRAGEES
Do you suffer from liquid, aggressive stool? Insert GELLYMATE directly into the pouch and the stool will become thickened and less aggressive. Perfect for ileostomy, colostomy and urostomy stomas. Jar 140 pcs. With odour neutralizer. Flacon 140 pcs. Order code GM 140 (capsules) Order code GD 140 (dragees)

BLUEMATE STOMA DISPOSAL BAGS
Special hygienic disposal bags to dispose ostomy pouches. Easy to use and hermetically closed. Opaque blue version of environmental friendly plastic. Order code Packed BM 100 100 pcs.

STOMA ACCESSORIES

COMBIMATE FLANGE ADAPTOR
This adaptor facilitates the application of a pouch without requiring any pressure as the fingers can be positioned under the outer edge of the flange. Perfect for the post operative period or for people with soft flabby abdomens or those who cannot tolerate any pressure. This adaptor is compatible with Combimate flanges and pouches, where the diameter of the pouch flange is 2 sizes larger than the diameter of the wafer flange.

Order code Flens size Flens pouch Packed
SA 4570 45 mm 70 mm 10 pcs.
SA 5785 57 mm 85 mm 10 pcs.
SA 70100 70 mm 100 mm 10 pcs.

COMBIMATE IRRIGATION FLANGES
Do you want to combine an irrigation sleeve with a ConvaTec or EuroTec 2-piece system? The COMBIMATE irrigation flanges allow you to attach any self adhesive sleeve in seconds and create a matching 2-piece sleeve.

Order code Flange Size Packed
IR 238 38 mm 50 pcs.
IR 245 45 mm 50 pcs.
IR 257 57 mm 50 pcs.
**STOMA ACCESSORIES**

**EuroTec tail clips**
Where applicable, two slender tail clips are included with the pouches. They can also be ordered separately.

Order code: CLS 10
Packed: 10 pcs.

**Night drainage adaptor**
When using a night drainage pouch it is absolutely necessary to use the included adaptor. These adaptors are included with the pouches and can also be ordered separately.

Order code: AD 10
Packed: 10 pcs.

**LUBRIMATE**
When the flange of the wafer is slightly coated with Lubrimate, the attachment of the pouch to the flange will be much easier, requiring very little pressure. Bottle with small brush. Free service product, only for users of the EuroTec Combimate system.

Order code: LM 010

---

**LEASORB SECURITY PAD**

Unfortunately some ostomates still suffer from leakages. Sometimes this is due to incorrect use or the failure of a device, but often this can also be due to a problematic ostomy. As a result one hardly dares to go out, let alone stay away from home overnight.

LEASORB security pads can increase self-confidence and contribute to a better social life as a result. Naturally it goes without saying that leakages must be prevented! However if a leakage does occur, if the consequences can be limited this provides calm and self-confidence. The LEASORB pad is stuck to the skin around the adhesive layer. An integral ‘super-absorbent’ layer must then absorb the leakage before clothing or bedding becomes soiled. And if no leakage occurs, the LEASORB pad can be used again for at least 5 times.

The LEASORB pad adheres to skin by a special silicone layer, which re-adheres each time and is easy to remove. Do you often have leakages or feel insecure? If so, contact EuroTec and we will send you some free samples.

Order code: LS05
Packed: 5 pcs.

Advice:
The use of a LEASORB pad should not be necessary at all. Do you have regular leakages? If so, please contact EuroTec. In many cases we can deal with the cause of leakage problems effectively.
Ready made convex wafers are often preferred to a wafer into which a convex insert has to be fitted.

1. A plain wafer can be cut to size easier than a ready to use convex wafer, due to the absence of the convex ring at the cutting stage.
2. You have a better selection in matching the diameter of the stoma with the inner diameter of the ConvexRing insert, particularly with larger and oval stomas.
3. Installing a convex insert yourself may reduce costs.

ConvexRing inserts are available in 2 different grades of convexity: Convex and Extra Convex. Available for flange diameters up to 70 mm and suitable for stomas up to 55 mm. See the table below.

<table>

</table>

ATTENTION: The margin between the largest stoma diameter and the opening of the convex insert needs to be at least 5 mm. Extra Convex inserts should only be applied on the advice of a stoma nurse.
Varimate Standard is classic hydrocolloid covered with a polyethylene film layer. It is extraordinarily skin-friendly and protects broken skin whilst the adhesive pouches on the surface can easily be changed without harming the affected skin. It can also be used to protect the edges of wounds. The advantage of Varimate Standard is that the surface can be easily cleaned and re-used to fix something to it.

Varimate SuperSoft is actually Varimate Standard (see page 82), the film layer of which is replaced by a top layer of polyethylene foam with a closed cell structure. The foam therefore absorbs no moisture. The advantage of Varimate SuperSoft is that it is extremely supple and flexible. That’s why EuroTec use it on all of their SuperSoft and SuperFlex products. A disadvantage of the Varimate SuperSoft wafers is that they can only be fixed once, because the foam layer is damaged when it is removed. Varimate SuperSoft wafers and strips can be used to protect an area of irritated skin to facilitate it’s natural healing. The foam layer has a cushioning effect for the prevention of bed sores but it does generate more shear friction than a hydrocolloid with a smooth film layer.

Customisation

In very difficult cases EuroTec can quickly respond and even manufacture customised products. A modified pouch model or another type of adhesive. We can often offer solutions within days.

EuroTec brings colour to ostomy care

EuroTec packaging is notable because of its colourful appearance. It is based on the art work of the Flemish painter René Costerop and creates a positive atmosphere. It’s no joy to have an ostomy, but it is often the only way to keep enjoying life.

You are welcome

In Roosendaal, near the Belgian Border, we frequently organise information sessions for groups of ostomy patients and nurses. If you intend to organise an excursion to the Netherlands, please visit our factory and enjoy a guided tour through the manual and automatic production departments. Take part in an exciting workshop and participate in a discussion in our indoor market place. These information days are completely free and catered for with a hot lunch.

WHAT YOU SHOULD KNOW ABOUT EUROTREC

The founders and managers of EuroTec were previously involved in establishing ConvaTec in the Netherlands. Later they founded the stoma-specialist company CombiCare, where they supplied stoma products and managed the care of more than 10,000 people with a stoma. This experience in product development and patient care has been invested in EuroTec.

A world of difference

EuroTec has over 500 different ostomy products, many of which can be combined with other brands. Problems with a failing flange? Stool or urine undermining your pouch or flange? Skin irritation or allergies? Then try EuroTec’s adhesive skin barrier. A totally different adhesive concept combined with extreme flexibility which will make a world of difference. And if preferred you can continue using the familiar pouches of your own product choice.

EuroTec is at your service

Whether you have an ostomy yourself or if you are a stoma care nurse, everyone will, at times, face problems. You can always ask EuroTec for support. It’s free and without any obligations. EuroTec employs specialized stoma nurses with much experience in all brands of stoma appliances. We often have a different view on problems and can often come up with unexpected solutions.
This Ostomy Product Guide is provided by EuroTec, manufacturer of ostomy appliances in The Netherlands.

With this booklet we hope to assist you in making the right choices.
